

Memo: change of calcitonin assay

Oct 2014

LabPlus will be changing our calcitonin assay from the Immulite to the Diasorin Liaison analyser. The correlation between the 2 assays is reasonable but not perfect.

To allow for re-baselining of MTC patients, both assays will be run in parallel for 6 months. The lower reporting limit will remain at 2 pg/mL.

For any queries please contact James Davidson (jamesd@adhb.govt.nz)
