^a 97% and 94% of ESBL *E. coli* susceptible to fosfomycin and mecillinam respectively

^b *E. cloacae*, *K. aerogenes*, *S. marcescens*, *M. morganii*, *C. freundii* and *P. vulgaris* may develop resistance during prolonged treatment with third generation cephalosporins

^c Cephalexin, nitrofurantoin, trimethoprim, and norfloxacin susceptibility results apply to uncomplicated lower urinary tract infection only

^d 99% of *H. influenzae* isolates were susceptible to tetracycline/doxycycline.
